

## PRODUCT DESCRIPTION

# Phytamax™

Phytamax™ is a granulated, thermostable, microbial phytase. Phytamax is a proven premium phytase for poultry and swine applications. Phytamax has a high rate of phytate degradation in feed ingredients, thus liberating most of the bound-phosphorus present in plant ingredients and making it available for the animal's nutritional needs.

In addition to the improvement in phosphorus and calcium release, Phytamax significantly improves amino acid availability and energy utilization.

- Starts working immediately
- Proven record of success
- Improves flock uniformity and reduces wet litter
- Optimizes animal performance and reduces feed cost for both poultry and swine

# Phytamax™

A scientifically proven premium phytase to drive performance and support optimal phosphorus utilization

## Feeding Instructions

### Poultry & Swine

Feed through the whole life of the animal at a rate of 50 g/MT feed.

For higher dose application, please consult with a nutritionist or a member of the BRI technical team.

## Specification

Color:	Beige to light brown
Structure:	Granular
Active ingredients:	Phytase fermentation solubles mixed and granulated with starch and calcium carbonate (limestone)
Moisture:	<10%
Enzyme:	Microbial phytase activity ≥ 10,000 FTU/g

## Legal classification

Feed Additive

## Storage/Shelf life

A minimum shelf life of 18 months from date of manufacture when product is stored in the original sealed bag under dry, cool conditions.

Store in dry, cool conditions (< 30°C). Keep opened bags rolled down tightly to maintain freshness.

## Handling/Safety

Product is safe to handle. No special protective gear or clothing is necessary. After opening bag, store product in tightly closed container or in original bag after rolling it down to close it tightly.

## Packaging

10 kg HDPE lined paper bags

4222 Emperor Blvd, Suite 460, Durham, NC USA 27703
